ABSTRACT

I am a 3rd-year Management Information Systems student and have been actively working in the software field for 4 years. During this time, I have developed various projects, conducted freelance work, and enhanced my technical and analytical skills by participating in different competitions. I serve as the CS Committee Coordinator within the Tarsus University IEEE Student Branch, where my team and I conduct projects and research on neural networks, image processing, and automation systems. Additionally, under the Ministry of Youth and Sports GEN2030 Project, I serve as a mentor trainer, providing artificial intelligence and coding training to high school and university students. My goal is to develop sustainable, scalable, and human-centric technological solutions that make people's lives easier.

EXPERIENCE

Vice President | Artificial Intelligence and Digital Transformation Society

June 2024 - March 2025

- As part of the activities carried out within the society, a software development-focused project was produced in the TEKNOFEST 2024 Technology for Humanity category.
- I actively participated in the software development processes of the project, which qualified for the finals and achieved a ranking.
- I gained significant experience in teamwork, problem analysis, solution design, and project management during this process.

Computer Science Committee Coordinator | IEEE Tarsus Student Branch

April 2025 - Present

- I lead the coordination of the Computer Science Committee within IEEE, planning and organizing technical events, managing the team, and monitoring project workflows.
- I organize software-focused studies, training sessions, and technical sharing events within the committee.
- I actively participate in activities based on various software technologies, primarily Java.

IT Intern | TNC Group Companies

October 2025 - November 2025

- I served as an intern in the Information Technology department, participating in data processing, basic automation processes, and technical support activities.
- I contributed to operations by developing various applications using Python and performed data analysis and reporting tasks using Microsoft Excel.
- I supported technical and visual content production processes utilizing Photoshop and AutoCAD.

Mentor Trainer | Ministry of Youth and Sports

November 2025 - Present

- I provide artificial intelligence and coding training to high school and university groups as part of the GEN2030 Project.
- I develop application-oriented projects with youth through basic and advanced level coding practices during the training.
- I contribute to their development of problem-solving, algorithmic thinking, and project-generation capabilities.

Full Stack Software Developer | Deva Yazılım Entegre Çözümler

June 2026 - Present

- I actively work as a Full Stack Software Developer, focusing on the design and development of a comprehensive stock tracking application.
- I develop responsive and user-friendly user interfaces utilizing React, HTML, CSS, and JavaScript.
- I build robust and scalable backend systems, designing REST APIs with Python and managing databases using PostgreSQL.
- I utilize Docker for containerization to ensure consistent development environments and leverage Git for version control and collaborative workflow management.

PROJECTS

TÜBİTAK 2209-A | Project Coordinator

May 2025 - Present

- **Description:** Developed a machine learning-based system aimed at predicting patient conditions during emergency medical response and minimizing response times.
- **Roles & Responsibilities:** Managed data collection, preprocessing, and analysis processes using Python. Built prediction models for patient condition, hospital occupancy, and response times utilizing Random Forest, XGBoost, and Gradient Boost algorithms. Targeted the determination of the fastest response paths through AI-supported route optimization.
- **Technologies Used:** Python, Pandas, Requests, BeautifulSoup, Machine Learning (Random Forest, XGBoost, Gradient Boost), Data Analysis, Route Optimization.

TÜBİTAK 2209-A | Project Member

May 2025 - Present

- **Description:** Developed an AI-supported automated data processing system to support digital transformation in accounting processes.
- **Roles & Responsibilities:** Focused on automatically parsing data from accounting receipts (including handwritten ones) and integrating them into accounting software using Neural Networks, OCR, Natural Language Processing (NLP), and Robotic Process Automation (RPA) technologies.

- **Impact:** Aimed to reduce error rates and processing times compared to manual data entry using a Python-based system.

TEKNOFEST - UAV Category | Autonomous Pilot & Image Processing Developer

February 2026 - Present

- **Description:** Actively working on the improved version of our team's UAV project, which ranked in the top 10 in the finals last year.
- **Roles & Responsibilities:** Responsible for developing the autonomous flight algorithms and real-time image processing systems of the project. I conduct research and development on autonomous mission planning, target detection, and image-based decision mechanisms.

CCN Holding WESHAPE Entrepreneurship Program

October 2025 - May 2026

- **Description:** Ranked among the finalist teams with my teammate Celal Acar in the final stages hosted by CCN Holding in Istanbul under the WESHAPE 2026 Entrepreneurship Program.
- **Roles & Responsibilities:** Actively participated in the development phases of our project, which provides accounting automation using OCR-based image processing technology during the 8-month mentorship and business development program. Developed solutions for the automatic reading, processing, and digital transfer of invoice data, representing the project at investor pitches and entrepreneurship events.

TÜSİAD Entrepreneurship Program

December 2025 - Present

- **Description:** Joined the TÜSİAD entrepreneurship ecosystem with an AI-based ECG analysis and early diagnosis system project.
- **Roles & Responsibilities:** The project earned investment and mentorship support in healthcare technologies, where I have taken active responsibility in product development, data analysis, business model design, and investor readiness processes.
-

Commercial Web Development Projects | Freelance Full Stack Developer

Active Development & Deployment

- **ieeetarsus.com:** Designed and developed the official website for the IEEE Tarsus Student Branch to facilitate event management, member communications, and technical content sharing.
- **elestirelhukuk.com:** Built a comprehensive web platform dedicated to legal articles, academic discussions, and publications, optimizing it for high performance and seamless user experience.
- **emektartarim.com:** Developed an industry-focused corporate website for an agricultural business, showcasing products, services, and corporate identity with a modern and responsive user interface.
- **Technologies Used:** HTML, CSS, JavaScript, Python, Django, Database Management, SEO Optimization, and Deployment.

SKILLS

Java, Javascript, HTML, CSS, Python, MySql, TensorFlow.js, OpenCv, AutoCad, Arena Gams, Excel, Adobe Photoshop, React, PostgreSQL

RECOGNITIONS AND AWARDS

Onur Belgesi 2023-2024 – Tarsus Üniversitesi
Yüksek Onur Belgesi 2024-2025 – Tarsus Üniversitesi
Teşekkür Belgesi 2024-2025 – Tarsus Üniversitesi
Onur Belgesi 2025-2026 – Tarsus Üniversitesi
